

DEALERSHIP GATES AND YARDS

The car behind the first.

Each car through each gate,
and the cars in each lot.

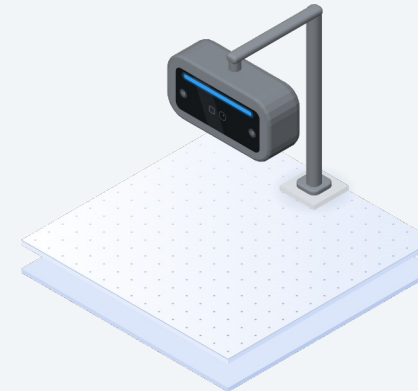

WHAT THIS IS

Pulses.ai is a UAE-born Physical Intelligence company: AI that understands your physical world.

For dealerships: the second car slips in.

Pulses Vision Pro at the gate

UNDERSTAND

Gate and yard counts, understood

ACT

Gate security told on WhatsApp

THE PROBLEM

One lift, two cars in.

The barrier lifts for one car. A second can slip in right behind it, uncounted.

The gate log and the yard disagree.

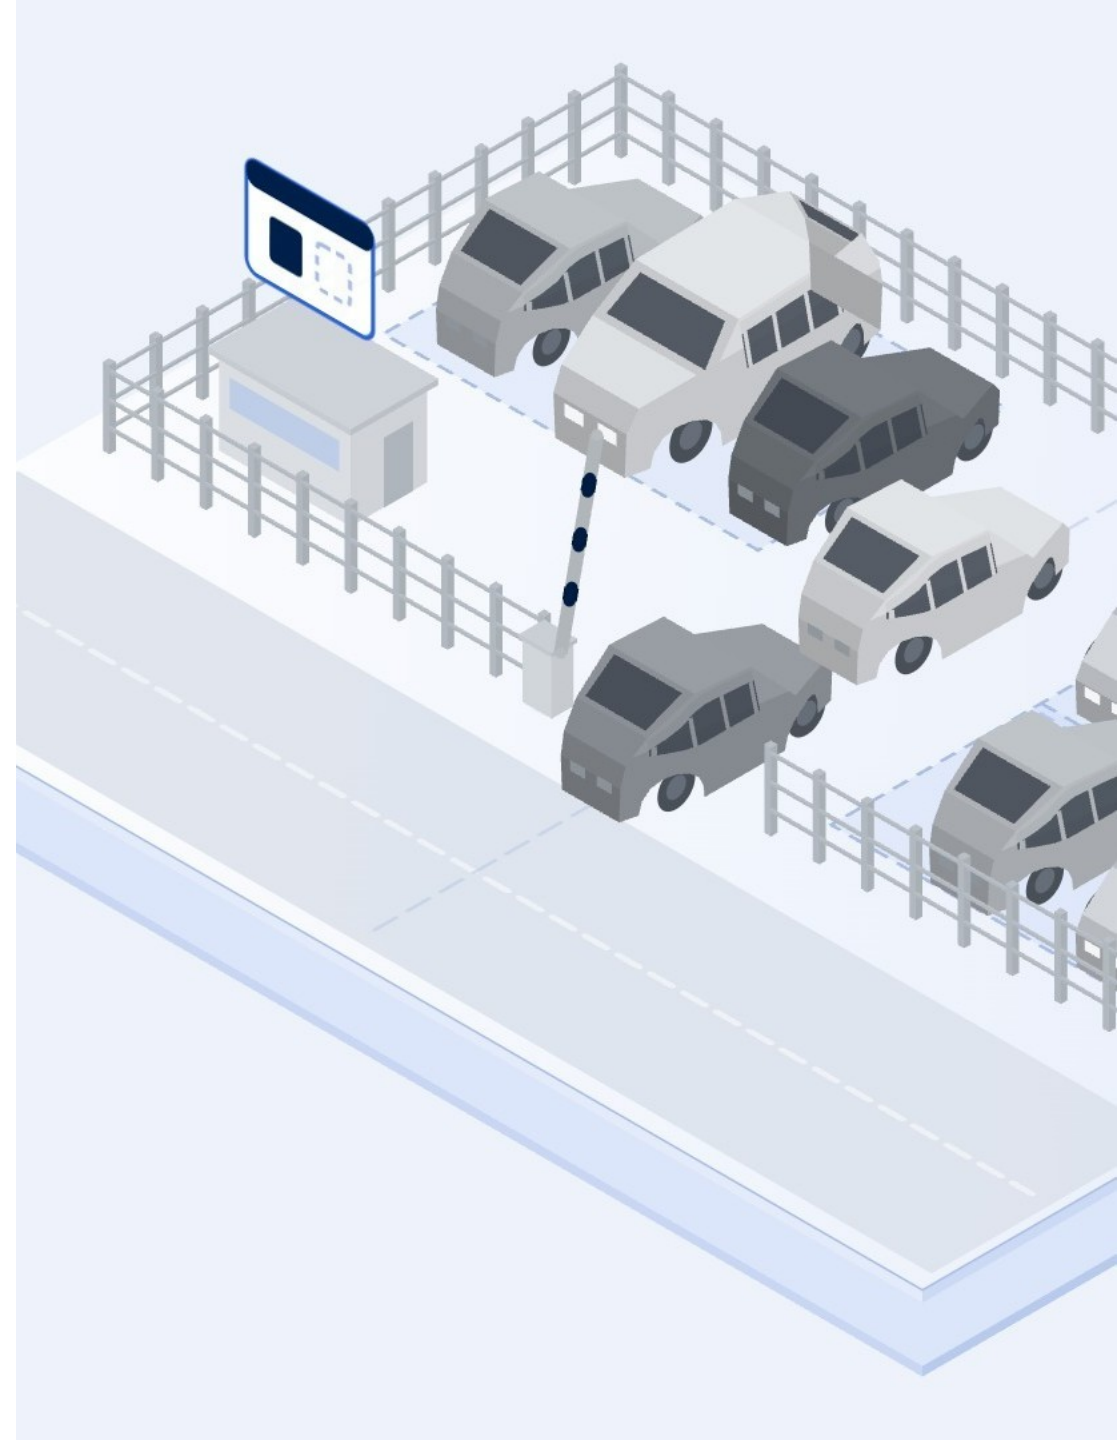

Nobody can say which gate let the extra car in, or when.

Lots counted by walking them.

How many cars stand in a lot is a guess until walked.

A second car, heard late.

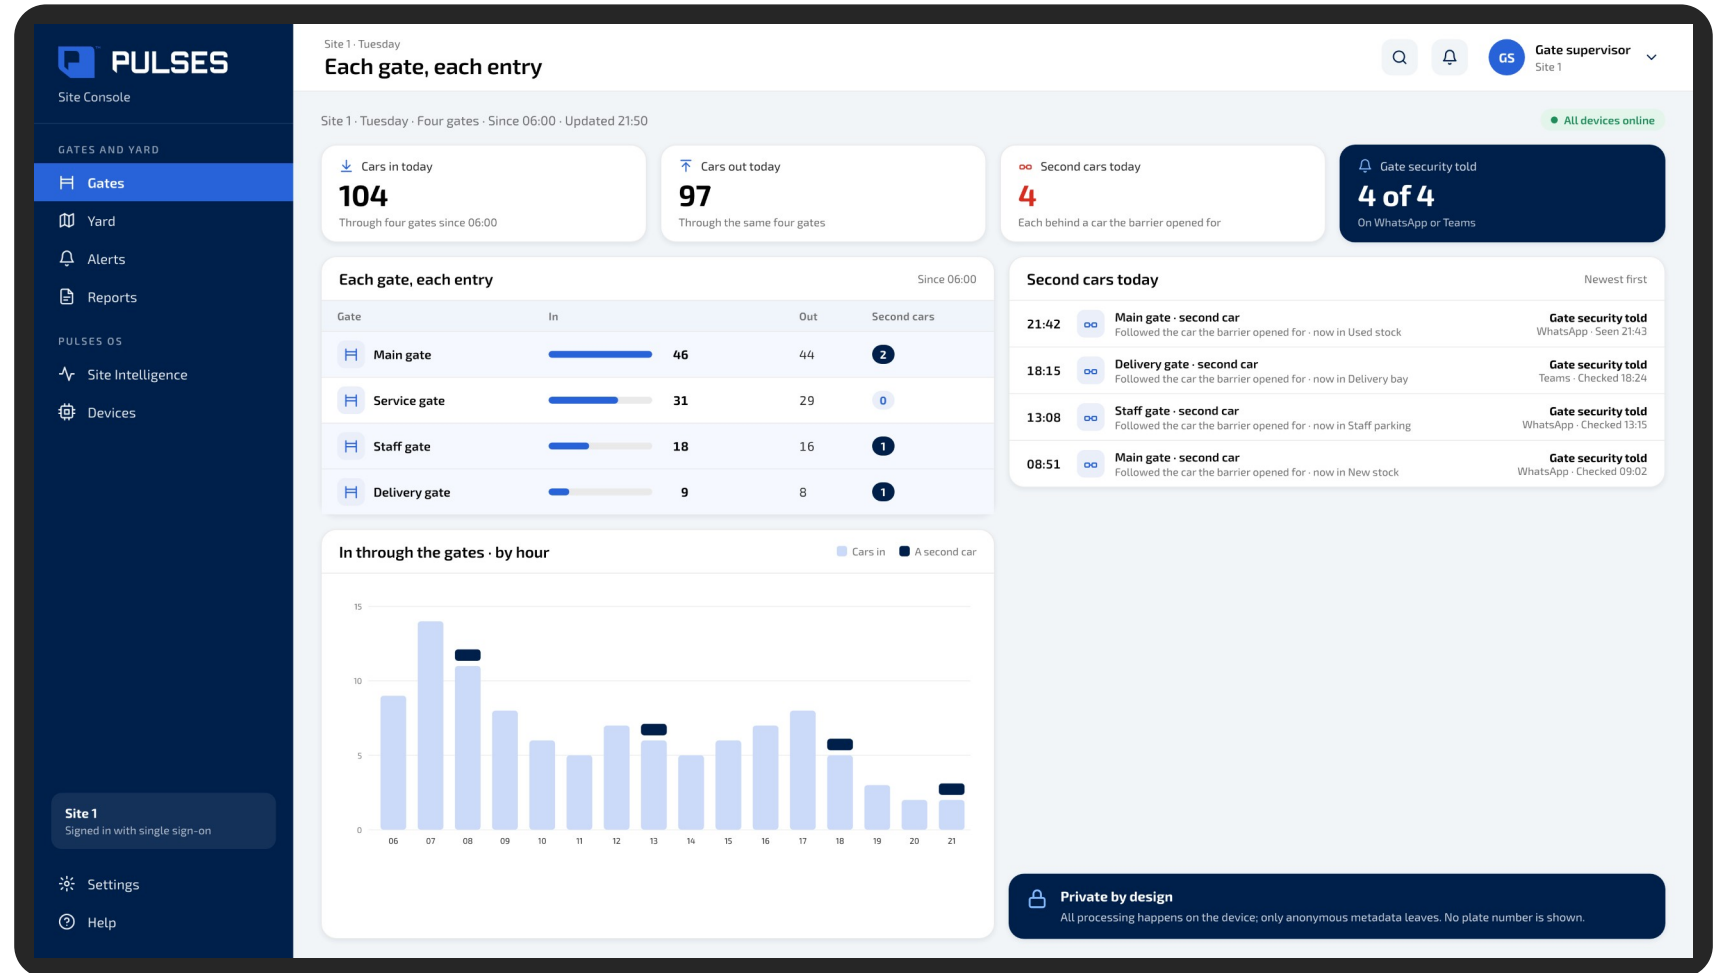

The person who can act hears about it later, if at all.

Gates

Each gate, each entry.

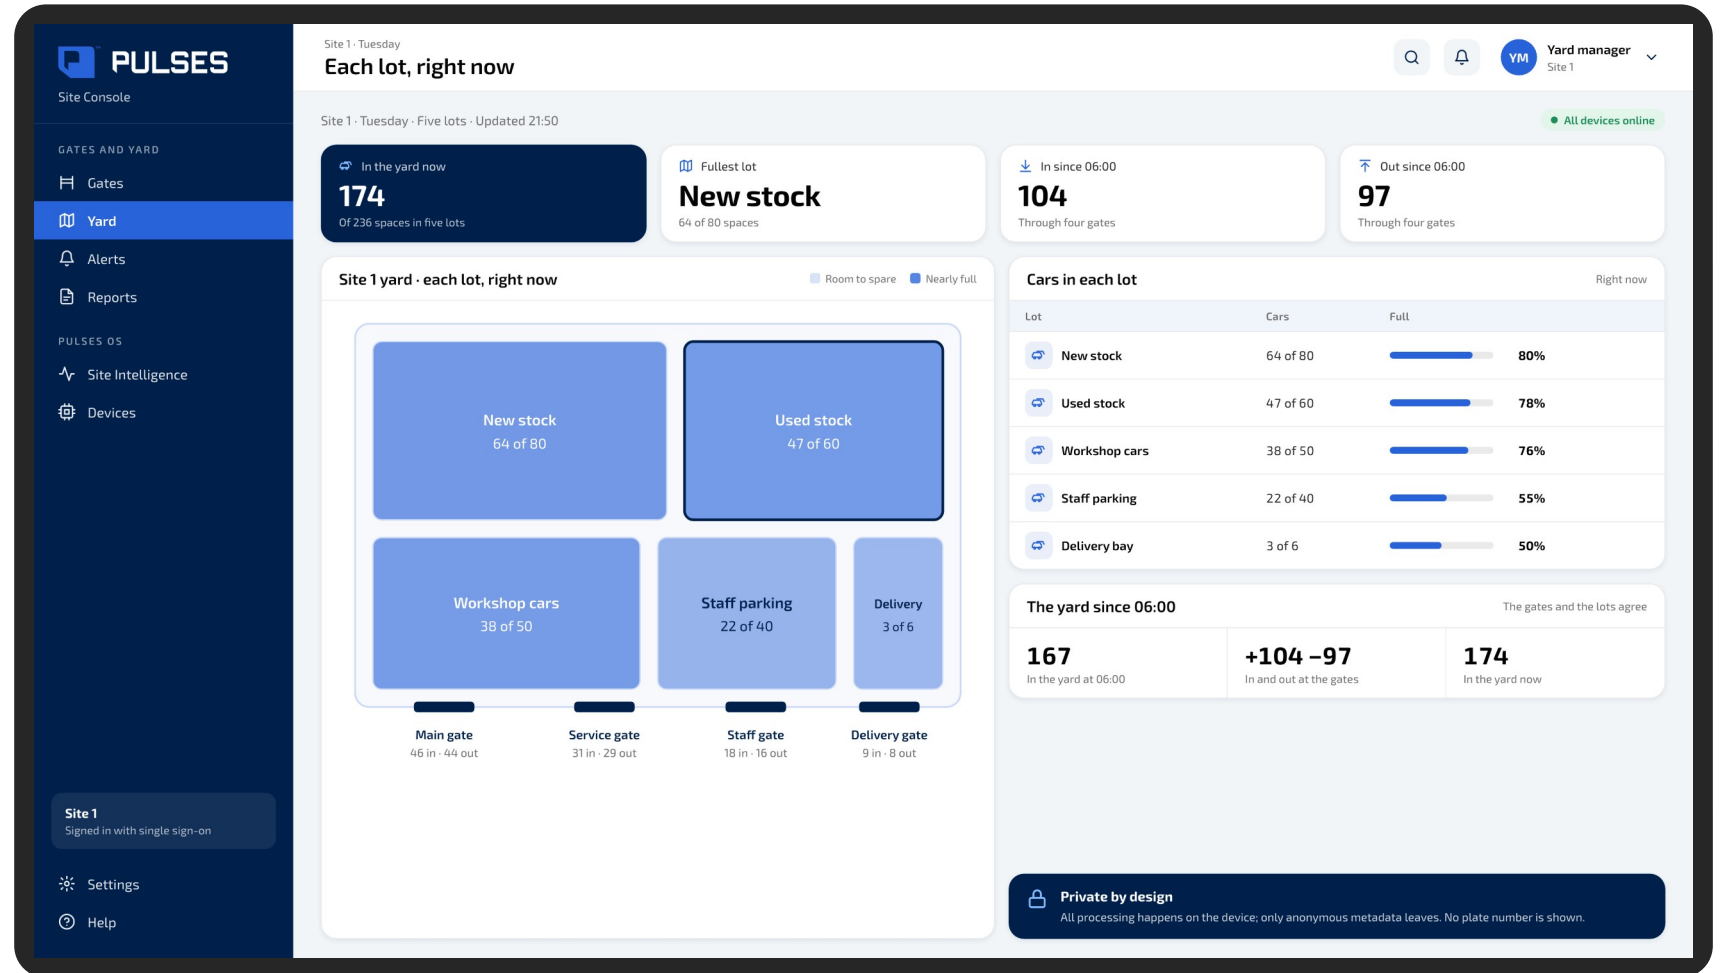

- See each gate's entries today, and the second cars among them, with the time each came through.
- Each second car listed with its gate and the lot it stands in.

Yard

Each lot, right now.

- See how many cars stand in each lot of the yard right now, and the day's in and out at every gate.
- The yard plan, lot by lot, beside the day at the gates.

Gate alert

Second car in. Security told.

- When a second car comes through, gate security is told on WhatsApp, Teams, SMS or email, and a person decides what to do.
- The alert carries the gate, the time and the lot.
