

Signed in, in person.

Each shift's sign-in, verified on the device.

WHO PULSES IS, WHAT THIS IS, HOW IT WORKS

Pulses.ai is a UAE-born Physical Intelligence company: AI that understands your physical world.

For site managers: a borrowed badge clocks in.

SEE

Pulses Vision
above the staff door

UNDERSTAND

Enrolled staff,
verified on the device

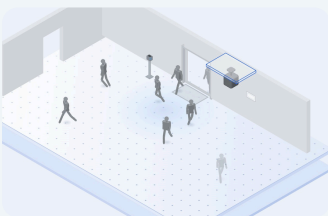

ACT

Supervisors get
each shift's sign-in

THE PROBLEM

Badges and PINs record a sign-in, not a person.

The site manager reconciles timesheets against what the door system says.

At the staff door, the morning shift signs in.

A building manager runs cleaning, technical and concierge shifts.

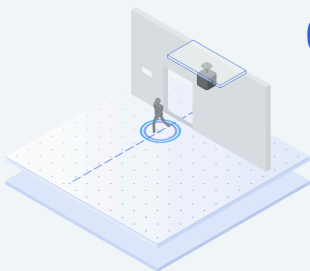

A borrowed badge clocks in.

Yet a borrowed badge still clocks in for someone who isn't there.

HOW IT WORKS

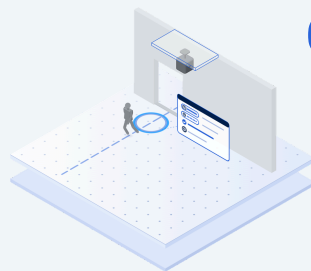

See. Understand. Act.

01

Pulses Vision above the staff door

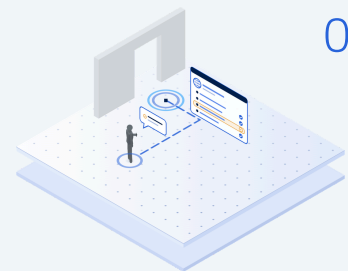

A Pulses Vision device on the ceiling inside each staff door: the staff entry, the service corridor, the shift room.

02

Enrolled staff, verified on the device

A sign-in is verified on the device, for staff who enrolled with consent under the organisation's declared workplace policy.

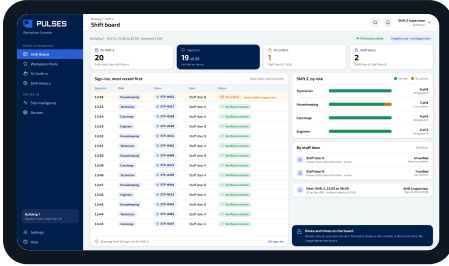

03

Supervisors get each shift's sign-in

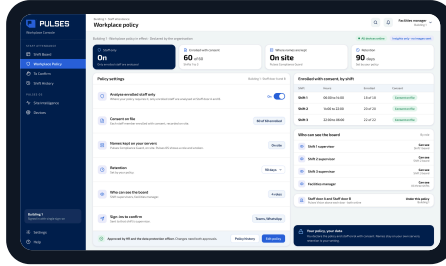

Each shift's supervisor sees who has signed in, by role and by door, site by site.

THE PRODUCT ON SCREEN

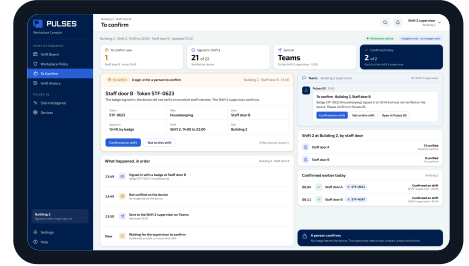

The shift, by role.

Each sign-in is verified for staff who enrolled with consent. Names stay on your own servers; the board shows roles and times.

Staff only, by your policy.

Where your policy requires it, only enrolled staff are analysed. Each staff member enrolled with consent, recorded on site.

Not verified? A supervisor confirms.

A sign-in that doesn't verify goes to the supervisor to confirm. It reaches them on WhatsApp, Teams, SMS or email.

YOUR POLICY, YOUR DATA

You declare the policy and staff enrol with consent.

Approved by HR and the data protection officer.

Changes need both approvals.

Names stay on your own servers.

Pulses Compliance Guard, on site.
Pulses OS shows a role and a token.

Retention is your setting.

Set by your policy.

No image leaves the device.

All processing happens on the device; only anonymous metadata leaves.

PROOF

150 million+ journeys counted across Pulses deployments

Anonymous platform total
